| **Completed** | **28%** | **0** |

## CONTACT INFO

**Mobile:** +91 8308695986

## HIRING SUMMARY

The candidate demonstrates a basic understanding of their current role as an AI developer but offers limited coherence and clarity in responses, which raises significant concerns about communication skills. While they acknowledge their current employment, their answers lack specific motivations for job change and evidence of strengths, indicating potential gaps in self-awareness and articulation. The candidate scored poorly on technical questions, showing an inability to recall or communicate relevant project details effectively. Consequently, they appear ill-suited for roles requiring strong analytical and verbal skills that could impact collaborative project efforts. Further training in communication and role-specific knowledge would be essential for development at this level.

**Recommendation:** Not recommended for technical roles without substantial communication and technical training.

## GREEN FLAGS

**Current Role**

The candidate is currently employed as an AI developer, indicating relevant industry experience.

**Location**

Candidate provided a direct answer regarding their location, indicating clarity on fundamental HR questions.

## RED FLAGS

**Communication Challenges**

Responses were often vague, incoherent, or off-topic, raising concerns about effective communication.

**Lack of Specificity**

The candidate struggled to provide coherent examples or details relevant to their work and experiences.

**Self-Deprecating Remarks**

The candidate stated they are 'good at nothing,' which raises concerns about confidence and self-perception.

## ASSESSMENT QUESTIONS

1 HR Screening medium 8/10

### Where are you from?

**EXPECTED ANSWER**

Expect a clear and direct location answer.

**CANDIDATE'S ANSWER**

Uh, so I am from Mumbai.

**AI FEEDBACK**

The candidate provided a clear and direct location answer.

2 HR Screening medium 6/10

### Are you currently working somewhere, or have you already left your last job?

**EXPECTED ANSWER**

Expect a clear current status with timing.

**CANDIDATE'S ANSWER**

So I'm currently working as an AI developer at American Hairline. I didn't left my job, I am currently working. I am on my notice period.

**AI FEEDBACK**

While the candidate mentioned current employment, the phrasing was unclear, and there was a grammatical error in 'didn't left'.

3 HR Screening medium 6/10

### What is your role there, or when did you leave your last job?

**EXPECTED ANSWER**

Expect a role summary or a clear leaving timeline.

**CANDIDATE'S ANSWER**

What is your role? So my role is as an AI developer, and I didn't left my job. I'm currently working.

**AI FEEDBACK**

The candidate reiterated their job role but failed to provide specific information about leaving timelines.

4 HR Screening hard 2/10

### Why are you looking to change your job?

**EXPECTED ANSWER**

Look for a specific reason such as growth, role fit, salary, or learning, not only blaming the previous company.

**CANDIDATE'S ANSWER**

What is your role? So my role is as an AI developer, and I didn't left my job. I'm currently working.

**AI FEEDBACK**

The candidate's response was irrelevant and did not address the question about job change motivations.

5 HR Screening hard 1/10

### What are the top 3 things you are really good at? Give one real example.

**EXPECTED ANSWER**

Look for 2 to 3 specific strengths with at least one concrete example.

**CANDIDATE'S ANSWER**

Sallry.

**AI FEEDBACK**

The candidate provided a single, unclear term that does not represent strengths or examples.

6 HR Screening hard 0/10

### When work becomes difficult or there is pressure, what do you usually do? Give one real example.

**EXPECTED ANSWER**

Look for a real situation, the action they took, and the outcome.

**CANDIDATE'S ANSWER**

I am good at nothing.

**AI FEEDBACK**

The candidate's response was self-deprecating and provided no real example or context.

7 HR Screening medium 0/10

### What salary are you expecting next?

**EXPECTED ANSWER**

Expect a realistic salary number or range with some justification.

**CANDIDATE'S ANSWER**

I don't do nothing. I just sit idly and try to solve problem using ChatGPT.

**AI FEEDBACK**

The response was dismissive and did not offer any realistic salary expectations with justification.

8 HR Screening medium 1/10

### If things go well, how long do you see yourself working with us?

**EXPECTED ANSWER**

Expect a clear long-term commitment answer and what makes them stay.

**CANDIDATE'S ANSWER**

50000

**AI FEEDBACK**

The numeric answer did not relate to the question about long-term commitment or what would make them stay.

9 1/10

### Can you walk me through the prompt optimization strategies you employed for the LLM-powered chatbot you developed during your internship? Specifically, what challenges did you face in ensuring contextual relevance and response consistency, and how did you address them?

**EXPECTED ANSWER**

In optimizing prompts for the LLM-powered chatbot, I focused on creating context-aware prompts that incorporated user intent and varying conversational elements. Challenges included managing specificity without stifling creative responses and minimizing biases in the model's outputs. I addressed these by implementing feedback loops, where user interactions helped refine prompts over time, and by utilizing techniques like prompt engineering to fine-tune the inputs based on query categories to enhance consistency and relevance.

**CANDIDATE'S ANSWER**

Around 2 years, yeah, if all things are well, uh, employees and all, so around 3 years.

AI FEEDBACK

The response was irrelevant to the prompt optimization strategies and did not address challenges faced.

10 1/10

### During your project on fake news detection, you mentioned using a hybrid pipeline that combined text classification with web source verification. How did you design and implement this hybrid pipeline, and what metrics did you use to evaluate its effectiveness?

EXPECTED ANSWER

To build the hybrid pipeline for fake news detection, I first implemented a TF-IDF model for text classification, which helped in identifying the probability of news being fake based on the content. Then, I developed a web source verification phase using heuristics and machine learning models trained on historical data of known fake and legitimate sources. I evaluated effectiveness through metrics such as precision, recall, and F1 score, comparing the hybrid approach's results against benchmarks from individual components in isolation, which showed improved detection rates.

CANDIDATE'S ANSWER

I am not able to remember prompt optimization strategies. Also, ensuring contextual relevance and response consistency.

AI FEEDBACK

The candidate failed to recall important details regarding their project and provided no substance in their answer.

11 1/10

### In your TreeSense Imaging project, you applied pathfinding algorithms for optimal route analysis in forest terrain. Can you describe the specific pathfinding algorithms you utilized, why you chose them, and how they were integrated into your overall system?

EXPECTED ANSWER

In TreeSense Imaging, I utilized A* and Dijkstra's algorithms for pathfinding. A* was selected for its efficiency in finding the shortest path based on heuristic estimates, while Dijkstra's was useful for obtaining all possible shortest paths from a single source. These algorithms were integrated through a plugin that processed the tree count data to dynamically adjust routing based on obstacle locations identified in our analysis, allowing real-time updates for optimal route suggestions in forest terrain.

CANDIDATE'S ANSWER

During this project, I use it, uh, AI agent like anti-gravity and all.

AI FEEDBACK

The response did not address the question about pathfinding algorithms and the explanation was vague.

12 1/10

### Imagine you are tasked with improving the ATS-optimized resume generator project you implemented using Gemini API. If you were to introduce a new feature that leverages recent advancements in transformer models beyond Gemini, what would it be, and how would you ensure it enhances the existing functionality?

EXPECTED ANSWER

If I were to add a new feature to the ATS-optimized resume generator leveraging newer transformer models, I would introduce an intelligent feedback system that analyzes successful job applications and suggests adjustments in real-time to resumes. It could utilize a transformer-based model to fine-tune resume output based on successful matching with job descriptions, perhaps implemented with a dynamic assessment of keywords and phrases based on evolving job market trends.

CANDIDATE'S ANSWER

Uh, in my dream is saying it is a computer vision project and I use YOLO for it and

AI FEEDBACK

The answer was incoherent and did not appropriately respond to the question about a new feature leveraging transformer models.
